

## Marie Morfouace

Gustave Roussy, Paris

After my PhD in Nantes (France), I moved to St Jude Research Children's Hospital (Memphis, TN, USA), for a postdoctoral position on translational research in neuro-oncology.

I then worked for the European Organisation for Research and Treatment of Cancer (EORTC, Brussels, Belgium), on the SPECTA program, a pan-European translation research platform and led projects such as Arcagen focusing on molecular profiling for rare cancers or IMMUcan (IHI funding) on tumor micro-environment.

I decided to join Merck KGaA (Darmstadt, Germany), as a translational biomarker lead, working on defining PD or predictive biomarkers for new molecules. I recently joined Gustave Roussy (Villejuif, France) to drive projects on liquid biopsy.
